

NIKHIL

Senior Full Stack Engineer | AI-Native Builder | React, Node.js & TypeScript | 7+ Years

nikhil.sharma2407@gmail.com • [+91-7011590623](tel:+91-7011590623) • linkedin.com/in/nikhil-web-js • nikhil-web-js.vercel.app

SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Redux, RxJS, HTML5, CSS3, SASS/SCSS

Backend: Node.js, Express.js, REST API, PostgreSQL, MongoDB, Python, Redis

Architecture & Performance: Micro-Frontends, Module Federation, Web Performance Optimization, Service Workers, Design Systems

Security & Quality: OWASP Top 10, SAST/SCA/DAST, Secure-by-Design, Unit Testing, Fortify, Veracode, SonarQube

AI & Dev Tools: Claude Code, Cursor, GitHub Copilot, Azure OpenAI, RAG Pipelines

Testing & Tooling: Playwright, Unit Testing, Git, Datadog, Amplitude, LaunchDarkly

WORK EXPERIENCE

Confluent India Pvt. Ltd. | Senior Software Engineer

Sep 2024 – Mar 2026

Confluent Cloud – Connect UI & Streaming Platform: React/TypeScript console for Kafka Connect-based real-time data pipelines.

- Conceptualised, pitched, and led an AI pilot integrating **Azure OpenAI**, built a streaming chat UI, a RAG pipeline powered by Azure OpenAI embeddings over the full-stack codebase, and GitHub webhooks for automatic re-indexing, **reducing FE/BE integration overhead by ~35%** by giving engineers instant codebase context across the stack.
- Served as SPOC and **led end-to-end delivery of Private Networking for Kafka Custom Connectors on AWS**, managing phased releases, drove cross-functional alignment across infra, security, and PM stakeholders, and resolved critical functional gaps to fulfil a long-standing enterprise customer requirement.
- Built a Node.js cost estimation engine with REST APIs for calculating projected charges across Kafka, Flink, and Connectors, enabling on-demand cost visibility with multi-tier discount evaluation.
- Implemented Server-Sent Events (SSE) to detect concurrent form edits in real-time and prevent data loss, while replacing polling for async calculation status updates, reducing unnecessary network overhead.
- Established post-release monitoring via **Amplitude & Datadog**, introduced fail-fast validations that reduced late-stage provisioning failures by **~17%**.
- Established E2E testing practice using Playwright across **20+ critical user flows**, adopted by the team prior to every release, saving **~6–8 engineering hours** per release cycle.
- Shipped features using Claude Code and Cursor as core dev tools, built AI-generated one-click environment setup scripts adopted across the team, reducing onboarding and environment setup time by **~40%**.

Paytm Money Ltd. | Senior Software Engineer

Feb 2022 – Sep 2024

Large-scale investment & trading platform focused on frontend platform architecture, performance, and real-time trading experiences.

- Built Hybrid Web trading widgets using React, powering core buy/sell flows and F&O dashboards on a high-traffic trading platform serving **100K+ daily active users**.
- Implemented the UI market data layer using Web Workers to process real-time WebSocket price feeds off the main thread, keeping Portfolio (PnL and day's gain/loss) in sync without blocking the UI.
- Built Express.js services computing derived trading insights (P&L, holdings analysis) by implementing data transformation logic and API endpoint handlers.
- Established **Module Federation micro-frontend architecture** as the standard for cross-app communication across KYC, Funds, and Stocks apps using Shared Workers, enabling independent deployments across teams.

- Pioneered prompt engineering practices for frontend development, sharing reusable Claude/ChatGPT snippets adopted directly by teammates for component generation and code refactoring.
- Leveraged GitHub Copilot to automate client-side analytics integration from PM-shared Google Sheets, reducing integration effort by **~35%** and enabling faster release cycles.
- Improved repeat-visit performance by **15%** using Service Workers and selective caching for static assets and non-market data.
- Optimized initial load & navigation performance (**~10–15%**) via adaptive media loading & preload/prefetch strategy.

Infosys | Specialist Programmer

Jan 2019 – Feb 2022

NIA Chatbot Platform

- Contributed to the **Infosys NIA Chatbot** platform, developed and maintained the **chatbot studio interface** using React & Node.js, enabling enterprise teams to configure conversation flows, manage intents, and deploy NLP-driven interactions across web channels.
- Integrated custom chatbots with **Microsoft Teams** and **Slack**, enabling enterprise users to access conversational workflows and business services directly within collaboration platforms.
- Integrated AWS Polly for real-time voice synthesis and developed an Alexa skill for conversational access.
- Built enterprise client POCs for John Deere, Aetna, and Morgan Stanley.

PERSONAL PROJECTS

Linux Automation Scripts - [Github Link](#)

Applying AI-assisted development and an instinct for UX friction to personal productivity tooling on Linux.

- Built a custom GNOME Shell extension that auto-moves fullscreen apps to a new workspace (macOS-style UX), identified the gap, spec'd and built it with Claude Code.
- Fixed Ubuntu sticky keys on Wayland using keyd one-shot modifiers, replicating the intuitive Windows/Mac modifier behaviour.
- Bluetooth MAC address sync script for dual-boot Windows/Linux, touchpad history gesture fix for Chrome/Brave on Wayland.
- ZRAM performance tuning and GNOME keyboard shortcut backup/restore utilities.

Registrar of Companies (ROC) Reports Automation — Freelance, 2016 (during B.Tech)

- Built and sold an automation utility for LAA & Associates, a Chartered Accountant firm.
- Generates Company and LLP reports in MCA-prescribed format by processing data from the Ministry of Corporate Affairs (MCA) portal.
- Replaced fully manual report generation for **5,000+ vendors**.

EDUCATION

B.Tech in Computer Science & Engineering

UIET-KUK, Kurukshetra University 2014 – 2018
